The Tragedy of Matthew Perry and America's Profound Addiction to Drugs

The laundry list of drugs found in Matthew Perry's home and, according to his autopsy report, in his body shows just how deeply Perry and the physicians who treated him had internalized the better-living-through-chemistry mantra that our pharmaceutical industry so successfully markets.

By **Alex Berenson**

Miss a day, miss a lot. *Subscribe to The Defender's Top News of the Day.* ***It's free.***

California sober.

If you haven't heard the phrase before, "California Sober" is a clever way to say, "I've quit drinking or using drugs, but I still smoke pot." Because cannabis doesn't count. Cannabis is "medicine."

Occasionally people who use the phrase extend it even further, usually to psychedelics.

To be California sober, you see, is not to be sober at all.

I kept thinking about California sobriety as I read Matthew Perry's autopsy report, a tragic and depressing glimpse into the way far too many Americans live now.

Matthew Langford Perry, who played Chandler Bing on the hit NBC sitcom "Friends," was found dead in a jacuzzi at his home in Los Angeles on Saturday, Oct. 28. On Dec. 15, the Los Angeles County Medical Examiner's department released Perry's autopsy report, available online with minimal redactions.

(An aside: I firmly believe autopsies should be public. As a 19th-century English judge wrote in explaining why families of the dead cannot sue for defamation against them, "The dead have no rights and can suffer no wrongs." But maybe they can help the living learn from their mistakes.)

Perry was a quintessential Californian man-child, though he was born in Massachusetts in 1969, spent much of his childhood in Canada and gained his fame thanks to a television show set in Manhattan.

"Friends" started in 1994, when Perry was only 25, and was an immediate and huge hit in a way hard even to imagine in today's fractured cultural landscape. By the late 1990s, all six of the "Friends" had fame and fortune.

After the show ended in 2004, the other actors all eventually managed to escape their youth and move forward with their lives. Not Perry. He was one of Hollywood's most desirable single men but never seemed close to settling down. He was forever Chandler Bing, clever, unreachable Chandler.

To quote Billy Joel: "He's quick with a joke or to light up your smoke/But there's some place that he'd rather be."

(We'll talk about Paul the real-estate novelist another time.)

The Wuhan Cover-Up AND THE TERRIFYING BIOWEAPONS ARMS RACE Robert F. Kennedy Jr.
"The Wuhan Cover-Up" by Robert F. Kennedy Jr.
ORDER NOW

Perry filled the void, or tried to, with drugs and alcohol.

He had a huge appetite for opioids in particular. As he explained in his 2022 memoir, he spent most of his life either using, recovering or fighting to stay sober. He went to rehab 15 times. His career slowly faded, though he was too big a star for it to end completely, especially after Netflix introduced a new generation to "Friends."

Judging A-list celebrities from the outside is a fool's game. But Perry seems to have been a good guy with a terrible drug problem. Notably, despite his decades of inebriation and bachelorhood, no stories about him came out during the MeToo years. The other five Friends seem genuinely gutted by his death.

His celebrity, his money and his charm protected him from the legal consequences of drug use, but they couldn't stop his body from rebelling. In 2018, he nearly died when his OxyContin addiction caused his colon to rupture; he required 14 surgeries and five months of hospitalization.

Then Perry got sober.

Sort of.

The autopsy report explains in its first paragraph that Perry was "reportedly clean for 19 months." But later in the same paragraph, it explains he "was on ketamine infusion therapy."

Ketamine is a powerful anesthetic generally used to sedate children and animals. (Among its street names is "horse tranquilizer," because, well, it's a horse tranquilizer.) It is generally considered a dissociative, meaning it causes users to feel they have left their bodies.

But it can have hallucinatory and euphoric effects too. It is commonly found at raves and clubs where users want to heighten their experiences. And it is addictive, though not as addictive as opioids.

"It's just a very strange drug — the strangest drug," a researcher told New York Magazine in 2019. (Someone I know who has used just about every drug once told me ketamine had the most powerful effects on him.)

Lately, ketamine "therapy" has taken off in the U.S. A website called "Get Joyous" offers to deliver ketamine lozenges for $129 a month — no commitment! Billboards advertising it loom over major cities.

Ketamine's advocates point to studies showing it is a fast-acting treatment for depression. "Following the excitement and hype surrounding ketamine's fast-acting antidepressant effects, numerous private clinics started offering ketamine, sometimes in a repeated manner," researchers wrote in 2018.

"The safety of such repeated ketamine infusions has not been fully investigated in large clinical and well-powered studies."

But because the U.S. Food and Drug Administration has approved ketamine for human use, physicians are free to prescribe it as they see fit (a rule that applies to every approved drug, except maybe ivermectin, but that's also a story for another day).

(A hit of horse tranquilizer will turn that frown upside down!)

And ketamine therapy is very profitable. (Treatments advertised on billboards tend to be.) The price for a single 45-minute infusion in a doctor's office is usually in the range of $1,000 to $1,500, cash or card upfront, please.

Of course, the price was no problem for Perry.

For a while, he was receiving ketamine infusions every other day, according to the autopsy report. That's a lot of horse tranquilizer. Even the drug's biggest advocates don't recommend dosing on that schedule for more than two weeks.

In his memoir, Perry wrote that ketamine "has my name written all over it," that he usually used it while blindfolded and that taking it "is like being hit in the head with a giant happy shovel," though he did not like the hangovers that followed.

In other words, Perry was using ketamine for a short-term high, knowing that he would crash afterward — just as he had previously used opioids.

About six months before he died he switched doctors to one who tried to lessen his dependence on ketamine, telling him he didn't need infusions every other day. His last in-office hit was about 10 days before he died.

By then the drug had its hooks in Perry. His autopsy report shows he died of the "acute effects of ketamine," which include cardiac overstimulation and respiratory depression at high doses, worsened by preexisting heart disease.

We will probably never know where he got the dose that killed him, but the medical examiner found residue in his stomach, indicating he'd ingested it.

RFK Jr. and Brian Hooker's *New* Book: "Vax-Unvax"
ORDER NOW

The description of Perry as "clean" seems to refer mainly to his opioid use. Yet even that isn't true.

At the time of his death, Perry was taking buprenorphine — "bupe" — an opioid sold by prescription. Like methadone, its poorer cousin, bupe is relatively weak but long-lasting.

The goal of bupe is not to get a user clean, but clean enough. Clean enough to function, clean enough that he won't chase heroin or fentanyl and potentially overdose.

Physicians and drug advocacy groups euphemistically refer to this form of doctor-prescribed addiction as "medication-assisted treatment" and point out that people on it are less likely to overdose than those who try to go cold turkey. True, and a good reason to keep buprenorphine in the medical arsenal.

Yet bupe — like methadone — cannot help but feel like a surrender to the idea of opioids. *You can't live without them, and we're not even going to ask you to try.*

In fact, the autopsy report shows that Perry was taking "30 mg" of buprenorphine (probably 32 milligrams/day, the maximum dose except under unusual circumstances, but unsurprising given his long addiction history) and that he was "hoping to be weaned down."

But that wasn't all.

The autopsy also mentions in passing that Perry was found to have lorazepam (Ativan) and a close chemical relative of clonazepam (Klonopin) in his blood. Ativan and Klonopin are both "benzos" — benzodiazepines, potent anti-anxiety drugs that also produce euphoria and are highly addictive.

So. Aside from the ketamine infusions, the bupe, the Ativan and Klonopin, and the nicotine vapes and lozenges, Perry was stone-cold sober.

California sober.

On top of that, detectives found a veritable pharmacopeia when they searched Perry's house.

The 20 drugs listed below include a statin and metformin, given for diabetes, as well as an antidepressant, a second antidepressant that doubles as anti-smoking medicine, a mood stabilizer, and an antipsychotic medicine that is often given as an anti-anxiety treatment.

Plus what might be called lifestyle medicines: generic Viagra and Cialis, the hair regrowth drug minoxidil, and testosterone — which Perry's assistant said had been making him "angry and mean" in recent weeks.

None of this is meant to judge Perry.

Several of his prescriptions were medically necessary by any standard. Men have tried to reverse the effects of aging and keep themselves potent long before Viagra or prescription testosterone existed. And Perry clearly knew how destructive opioids were for him and wanted to avoid them.

But what the laundry list above shows is just how deeply Perry and the physicians who treated him had internalized the better-living-through-chemistry mantra that our pharmaceutical industry so successfully markets.

No wonder he and the people around him defined sobriety so loosely.

And no wonder he was so far from truly shaking his dependence on drugs when ketamine finally killed him.

Interesting that the experimental mRNA shots played absolutely no role in cardiac damage according to the medical examiner, because it was not mentioned. I'm not saying all those medications were benign, but one was deliberately left off the list. I wonder why?

23 days ago
Hi B :) There is no peep about the jabs and there won't be. It is the elephant in the room that is controlled by; the corrupt. When up against such evil, first, stay safe. Then slowly move away from sight.....then you can assess the situation and do and act accordingly.

The only thing that is going to bring out this act of war and genocide on us is to be smart and educated.

Roger Waters in an interview recently in which he told about how his mum said to him when he was a child, (not word for word of course) ....'when you find yourself in a pickle or are up against a great disturbance, read, read, read until you know all the facts. Don't just read what you feel strongly about, but read about the opinions of those you disagree with.......only then......you are ready to make a decision.

Then do it!

You already know the answer. More and more celebrities are dropping like flies or are injured. Just look at Justin Bieber & wife, and Celine. I'll bet the farm that Andre Braugher took the jab as well. Eventually, they'll be too many deaths to excuse as being everything else but the bio-weapon, but then again, the DOD designed this to cut in a thousand ways so that they can claim it's all kinds of things.
9 0 Reply • Share ›

Ricky Ricardo → Naga
18 days ago
Everyone who works in the movie industry, had to take the bioweapon injection...the same with sports athletes. They are indeed dropping like flies!
0 0 Reply • Share ›

CastleConnell → Naga
23 days ago
I said that 'tongue in cheek' of course I know it is all part of the gaslighting campaign. But seriously though, how was the medical examiner influenced to not include the shots. Was it social pressure, fear of losing his license? The CDC does not deny the shots can cause heart damage, so the information is not being hidden at this point. All the pro vaxxers were relieved to hear it was due to Ketamine, and took satisfaction toward the vaccine risk aware to smugly state 'it was the ketamine.'

Ricky Ricardo → CastleConnell
18 days ago
I'd put my money on that one! I've seen stories of a number of "celebrities" who died "suddenly", "mysteriously" and I can guarantee you that they were deaths from a lethal injection. No matter how many millions die from the mRNA bioweapon, the media, "health" agencies and our gooberments will **never** admit it!

Very well written article that reveals how sick America is. Not in the usual sense of sickness, but based on the excesses of medication and the escalating side effects. Looking beyond the medical industry we find roundup, GMO crops, EMF radiation, pizza, potato chips, French fries, pastries, etc. What ever happened to the idea that our health is our greatest wealth? How has the mainstream lifestyle drifted so far from the simple natural healthy lifestyle? I live out in the jungle on Maui eating lots of fruits, vegetables, and grains. At 64 I'm so grateful that I don't take any medications of any kind. Life in the slow lane is absolutely wonderful.

Unfortunately you are an exception having your wealth in the currency of health! I read where at 5% of the worlds population, we Americans consume 55% of all pharmaceuticals prescribed, very sad indeed. On top of that, researchers have concluded that our pioneer forefathers consumed an average of 22 lbs of refined sugar per year (1800's). Fast forward to 2012 and it's now at 180 lbs per year! Broke down to per day consumption the reality looks like this: 1800=28 vs 2012=222 grams!
That's an average!

While this may not be literally true, it sometimes feels that way. It is unclear to me what the ultimate aims are of those who control the big drug companies. I mean: If someone didn't manufacture insulin a little girl I know would die. So there is a "good" side to making drugs. How can we convince people not to take the bad drugs? I don't know if we can successfully get the bad guys out of the drug manufacturing business. But it seems we have no choice but to try.
0 0 Reply • Share ›

James → Larry Cox
23 days ago
Before insulin, diabetes was a thing but people still lived, they simply went on a no carb diet. Getting energy from fats as opposed to Carbs cuts out the need for multiple daily injections of insulin. (Read about how they tested for diabetes way back in Victorian times.)

Very sad. It is obvious Matthew Perry was dealing with demons and past trauma in his life that had been unresolved. And it's very possible he had addictive tendencies within his genetics as well. My former husband (passed away at the end of 2020 at 63) was similar in behaviour and loved taking Pharma Drugs. He did not realize the consequences, addiction or possible injuries from taking them.
May Matthew Perry RIP.

Yes, and maybe he simply knew too much about how truly inauthentic this entire reality we all find ourselves in truly is, and he felt trapped in the rock-and-the-hard-place most of us feel as the Pyramid Ponzi Scheme we are controlled by is on a crash course...the call is coming from inside the house and nobody is truly coming for our rescue in physical form, and we are all so damn divided and dumbed down as well as fully drugged, well, "hope" seems like a pretty tall order.... All by design of course!

Some months ago I saw on the mainstream TV even on how the core of the Earth stopped rotating. This seemed like a pretty big deal and I know enough about the Poles flipping in our history as it indicates in the geological record. Something like every 13,000-15,000 years. Sorry I don't have the facts right now. Anyway, the conversation went on to express that the Earth's magnetics are at an all time low...the shield is weak and this allows the Sun to make us hotter and to throw fire balls our way doing possible damage on a radiation level as well as damaging technology...we don't know what is really going to occur when the Poles actually flip? Haven't seen any more on the fact that the core stopped rotating either!

Well said....my friend.

As difficult as it will be because we are all so caught up in the media and psyops, we MUST pay close attention to our children and our neighbors children. Even though many, adults alike, have no clue to what is going on in the world, there are those of us that do and as usual, it will take the tough ones, the independents thinkers and doers, to guide our youth.

We are all they got.

I will pray for your son that he find some semblance of sanity in his world and maybe he will be one of the strong ones to be able to be a role to his peers.

Good luck and God Bless~ xo

Matthew Perry's body had been through so much. It was astonishing. A miracle he was still alive. His doctor had to know that the Cov id jabs would weaken his immune system. Tragically, Matthew took a number of the DNA altering shots. Only God knows how many. He suffered from depression. Matty will never know how he HELPED lift the depression of many viewers of the Friends sitcom. I know someone who watched Friends since she was 14 yrs-old. She's now in her mid thirties and watches re-runs of Friends every day as do millions. She said as a unhappy, stressed 14 yr-old, Matthew made her laugh. She's heartbroken over Matthew losing his decades-long, hard fought battle against addiction. God forever bless you, Matthew! You will never be forgotten! You brought joy and laughter to millions. You are very much loved! Forever! Rest in eternal peace with God's holy angels, Matty.

Vaccinated no more! Oct 28, 2023 Matthew Perry: "Could I BE Any More Vaccinated?"

Which leads to the relevant part — Perry proudly promoted and sold a "Could I BE Any More Vaccinated" shirt and urged his 7 million followers to get jabbed: I really hate how this poison jab has divided our world. I would love to go back to a time when funny people were allowed to just be funny.

https://wltreport.com/2023/...

Kim from Brooklyn
23 days ago

The sad ending to Perry's life and his only wish was to be able to continue to help those addicted and suffering mental disturbances and societal pressures that we are all under right now, I would like to offer the only thing that holds any weight these days.

And that is that Friends are the family we never had. Friends many times are who we can go to when we are sad; the first person to go to when we are happy and the only person to go when we want an honest opinion,

Here's to my friends here at CHD. To staff and editors and proof readers and even those that seem to want to destroy all that is good........My love and blessings go to you. We are all in this together.

As John Lennon once sang.....Imagine.......Peace!

Alex Berenson: Your crude comments about Buprenorphine indicate a lack of knowledge about its use or whom benefits from it and the many patients who then get off of it. I am Board Certified in Addiction Medicine and have been taking care of patients with substance use problems for about 12 years. Medication Assisted Treatment is not a "euphemism", it is a fact. We don't believe in "better living through chemistry" and I am surprised you used that phrase since you are married to a practicing physician. Fentanyl is generally smoked because it gets into the drug stream faster. It is also one of the most addictive narcotics that is abused. Buprenorphine is given to remove this drug from the receptor in a dose that keeps you from going into withdrawal and keeps you sober because of the long term biological effects on the brain and receptors that have altered the mu receptor. Patients simply cannot go from Fentanyl to "nothing". If, as a medical science writer, you had completed even 5 minutes of research on this topic, you would know this. I have patients who have been on this drug for years who are now sober, working full time, or going to school and maintaining relationships. They are not high; they are not Matthew Perry. Their lives have been turned around. I also have patients who then decide to wean off the medication. I support both approaches. And finally, neither you nor I know if this was a non intentional overdose or if he committed suicide. He was, after all, alone when it happened and has had significant medical and psychiatric problems.

To the Defender: Your usual medical writer, Michael Neradakis, is superior to Alex Berenson. He does his homework and does not get on a soapbox with his personal opinions. Please do not continue to lower the standard of this website with any more diatribe from writers like Berenson. I am truly appalled you did this.

I stepped right out of the Loop on all of this apparently. I never saw any of Matthew Perry's ads on just how stabbed he truly was...not one. Wow, I'm truly amazed at how much his body actually took before the intentional extermination finally overwhelmed him. I'm sure the Perps are studying the data on him and feel pretty confident in their new Death Dust they plan on using on us...where are the "trials" taking place, how many Constitutional Rights have they wiped their asses with now?

Zombie Apocalypse is already here! So many weak, sick and of course addicted! Just how the perps/DOD want us!

I have a friend traveling for the holidays and she is desperately trying to find Food Worth Eating! I told her to just Fast as much as possible.

We all are going to have to get used to people dropping dead all around us from here on out. Anyone not showing awareness of what is really going on is ultimately lost already at this stage of the PSYOP/CON.

We don't even know if Matthew Perry was really stabbed at all or if he was just pushing it for the perps like so many celebs these days.

Bless this mess!

No man or woman in their early 50s should be on that many medications. I would even dare to say no human being of any age should be on that many medications. Polypharmacy has been a problem for decades (often with multiple doctors prescribing multiple drugs without communicating with other providers). It is medical negligence at best and malfeasance at worst. While every person has responsibility for his or her own actions (no one forced these drugs down his throat), I would partly blame the medical system for this tragedy. His doctors, nurses and therapists failed him miserably!

Drug availability and abuse won't stop any more than war will stop: It's too profitable--billions and trillions of dollars. Drug money is circulated throughout all the major banking systems, governments, intelligence agencies, and militaries of the world. What do people think funds the intelligence community and their Black Operations, their Unacknowledged Special Access Projects (which are outside the purview of the President) and the Acknowledged Special Access Projects?
It's certainly not taxes; taxes barely cover the interest on the national debt.

This is a copy of Alex's substack article which he wrote very recently.

When I was in junior high, I was exposed to a school-wide anti-drug presentation which I took very seriously. I only exposed myself to any types of drugs for a year when I was 25 years old. And since then I have learned the difference between feeling "well" for a period of time and actually getting well and staying well for the long haul
